SUMMARY

Software engineer with over a year of production experience across four roles, focused on backend development with Python and Django and working across the stack with TypeScript, React, Next.js and Angular. Built the real-time backend of a football app with 10K+ downloads, the myMedPal telemedicine backend with audio/video calls and chat, and a B2B/B2C commerce platform, plus the CI/CD and servers behind them.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, HTML/CSS
Backend	Django, Django REST Framework, FastAPI, Celery, Django Channels, WebSockets, REST APIs, OpenAPI
Frontend & Desktop	React, Next.js, Angular, RxJS, Tailwind CSS, Electron
Auth & Security	JWT (rotation, blacklisting), OAuth 2.0 (Google), 2FA (OTP, TOTP), httpOnly cookie sessions, RBAC, rate limiting
Databases	PostgreSQL, Redis, SQLite, MongoDB, MySQL, SQLAlchemy, Alembic
Testing	pytest, pytest-django, factory-boy, Vitest, Playwright
DevOps	Docker, Docker Compose, GitHub Actions, Nginx, Let's Encrypt, Cloudflare Tunnel, Linux VPS (Hostinger, Oracle Cloud), Sentry
AI & Automation	Claude API, Claude Code (AI-assisted development), n8n, LLM workflows, AI agents
Integrations	AWS Cognito, Firebase FCM, Agora, Flutterwave, Cloudinary

EXPERIENCE

Freelance Software Engineer <i>Advergo Sports & Fashion Wear Ltd. · Red Elevators</i>	Jun 2026 – Present <i>Remote</i>
- Lead backend engineer and frontend contributor for Advergo's live B2B custom-order and B2C retail platform (advergo.org), built with Django, Next.js and PostgreSQL - Designed a 12-app Django REST backend with 38 models and 160+ routes across public and staff APIs, with a quote-to-order flow that generates invoice, quotation and delivery-note PDFs via Celery - Implemented JWT auth with refresh rotation in httpOnly cookies through a Next.js server layer, plus Google Sign-In, email-OTP staff 2FA, RBAC, rate limiting and audit trails with login geolocation - Wrote 370+ pytest tests and a GitHub Actions pipeline (lint, migration and OpenAPI checks) that gates Docker deploys to production and an isolated staging environment behind Cloudflare Tunnel - Shipped the Red Elevators agency site (redelevators.com, Next.js 16) with self-hosted Umami analytics and event tracking, and containerized their Flask lead-generation tool, both with CI/CD behind Cloudflare Tunnel	
Software Engineer Intern <i>Factoryze Technologies Limited · Academic internship</i>	Jun 2026 – Sep 2026 <i>Dhaka · Hybrid</i>
- Automated short-term-rental guest onboarding with n8n workflows that sync guest and booking data across Jurny, Autohost, Monday.com and QuickBooks - Developed Claude-powered triage for Gmail and Outlook, sorting a property manager's inbox into 8 categories - Added Claude-drafted replies with human approval in Telegram, revision rounds and full logging	
Junior Backend Developer <i>Join Venture AI · International client projects</i>	Dec 2025 – Feb 2026 <i>Dhaka · On-site</i>
- Sole backend engineer for ScoreLivePro, a football app on Google Play (10K+ downloads) and the App Store - Engineered real-time match updates with Celery syncing live data every 15 seconds under Redis locks and pushing only the changes over WebSockets, with FCM alerts for goals, lineups and kick-offs - Secured the API with JWT refresh rotation, Google OAuth 2.0 sign-in and email-OTP flows across about 60 documented REST endpoints; reduced paid sports-API calls through targeted fetching - Built the original backend for myMedPal (mymedpal.net), one API for iOS, Android and doctor web apps: Agora audio/video calls, JWT-authenticated WebSocket chat, live booking slots and Flutterwave payments - Set up production servers for client apps with Docker, Nginx, Let's Encrypt TLS and WebSocket proxying, deployed through GitHub Actions with multi-arch (ARM) builds	

Junior Software Engineer

MADD Technology

Software Engineer Intern

Aug 2025 – Nov 2025

Dhaka · On-site

May 2025 – Jul 2025 · Remote

- Delivered features and fixed API, database and scheduling issues across multiple company products
- Converted the team's HTML/CSS prototype into an Angular 19 app and built its Electron shell (secure IPC bridge, 60+ handlers) for **Neeramoy**, an offline-first clinic desktop app for macOS, Windows and Linux
- Designed its 17-table SQLite layer and sync engine, remapping offline records to cloud IDs and syncing on reconnect; added Cognito OTP login with a 7-day offline session
- Created and published **neeramoy-sdk** ([14 npm releases](#)), a TypeScript client covering 40+ REST endpoints with passwordless AWS Cognito login

SELECTED PROJECTS

- Built **wasikahmed.me**, a portfolio with a custom admin CMS (Next.js 16, MongoDB) featuring RBAC, TOTP 2FA, content version history, refresh-token reuse detection and CSP; 230+ Vitest and 20 Playwright tests; CI/CD with automatic rollback on a self-managed VPS
- Published **sh3bang**, a Python CLI toolkit built with Typer and Rich, on [PyPI](#) (4 releases)
- Solved 135+ programming problems in Python and C++, including about 70 on LeetCode

EDUCATION

American International University-Bangladesh (AIUB)

B.Sc. in Computer Science & Engineering, Major in Information Systems

Dhaka, Bangladesh

May 2022 – Sep 2026
